

- high performance cutting automatic saw
- angular cutting in range from -60° to +60°
- manufacturing steel and aluminum profiles
- possibility to save hundreds of production orders

Requirements for precise final processing of aluminum bars and steel profiles have been the reason for the development of a new circular saw ExactCut MAM/MAC 140 DoubleMitering.

CUTTING RANGES [mm]			
	○	▭	◻
0°	ø 10–140	10×10–100×150	10×10–100×100
45°	ø 10–140	10×10–100×110	10×10–100×100
60°	ø 10–140	10×10–75×90	10×10–85×85

Possibility of fully automatic angular separation in high performance and cutting quality adds a new dimension of use. This new universal saw meets all the requirements for mass production of angular parts and the ability to length optimization in multiple production orders to ensure maximum efficiency in material cutting.

Equipment with modular SIMOTION control system in machine delivers a high basic standard and enables seamless expansion of the saw with needed custom peripherals.

The main use of this machine is particularly in the areas of mass production of aluminum and steel frame structure, cutting lines and other manufacturing operations requiring precise, unattended, high-performance cutting.
